

Barrier Correcting Complex

NOTE: While Barrier Correcting Complex may help correct visible imperfections, it is not intended to cure skin diseases or other medical conditions. The main ingredient in Barrier Correcting Complex is 1,3/1,6 Beta Glucans, a patented polysaccharide from the cell walls of Baker's yeast. 1,3/1,6 Beta Glucans is a known Biological Response Modifier that supports the body's natural ability to correct itself.

Sodium Carboxymethyl Beta-Glucan (1,3/1,6 Beta Glucan) | highly purified yeast-derived 'repair & defense' molecule aka a 'Biological Response Modifier'*, challenges skin to correct itself, accelerates surface recovery

Sodium Hyaluronate | high molecular weight bioactive moisturizer; binds up to 1000 times its weight in water to skin's surface for long-term hydration and elasticity

Epidermosil (Silanetriol and Hyaluronic Acid) | organic silicon enhances the delivery of low molecular weight hyaluronic acid to amplify skin barrier cells and natural hyaluronic acid

MicroHA™ Super Active Hyaluronic Acid (Hydrolyzed Sodium Hyaluronate) | fast-penetrating free radical scavenger and super-hydrator, enhances barrier protection, reduces visible inflammation and irritation, helps repair damaged cells post-sun exposure, reduces cellular stress

Dermal Respiratory Factor (Saccharomyces Lysate) | helps correct red or yellow skin tones, calms signs of inflammation, improves skin's energy levels for more rapid correction, reduces cellular stress

Silver Ear Mushroom (Tremella Fuciformis Polysaccharide) | antioxidant, five times more hydrating than hyaluronic acid

Trehalose | antioxidant cell protector and hydrator; found in 'resurrection' desert plants that bloom after years of dormant dehydration

Ergothioneine & Mannitol | antioxidant cell energizer and hydrator

Phospholipids | liposomal micro bubble; supplements skin's natural moisture barrier *Biological Response Modifiers, also known as BRMs, are molecules produced naturally in plants and yeasts, with yeast-derived BRMs the most powerful. They are also produced by the body in response to infection, disease and arthritis, 1,3/1,6 beta glucans are BRM's due to their ability to modulate a general (non-specific) and positive reaction by the body's immune system. In cosmetics, the skin can react to 1,3/1,6 beta-glucans on the surface of the stratum corneum, triggering a general self-repair response that results in more transparent, healthier-looking, and younger-acting skin.

Does not contain fragrance, colorants or parabens. Vegan.
FRAGRANCE None pH 5.1 SOLUBILITY Water-based liquid Home Care For best results, apply 1-3 pumps of Barrier Correcting Complex directly to a freshly cleansed face, neck and décolletage twice a day.

This complex may also be used wherever the healthy appearance of external skin is compromised.
